

Breathing fire into green energy

Win a supply of an environmentally friendly wood and coal alternative in our online competition.

STAY cosy and green on the waterways this autumn and winter with Green Dragon Fuel, the only rapeseed-based fuel available as a traditional log and a proven environmentally friendly alternative to both wood and coal.

Rapeseed is becoming increasingly popular as a healthy food oil, but the oil isn't the only use for this thriving British crop. These rapemeal logs burn three times longer than wood, and give off twice the heat. They're ideal for year-round green energy and can be used on all solid-fuel burning appliances including boilers, stoves and open fires.

Green Dragon logs are made from the rapemeal co-product of rapeseed oil production, which is normally used to make animal feed or, in some cases, thrown away.

This cost-effective and green fuel is the result of a carefully thought out and unique cyclical process designed by the Phoenix Group - a collective of farmers who began developing green food, fuels and energy when they discovered their crops could also be used to help the environment.

The Phoenix crops are grown on a collective of 20,000 farming acres and the entire low-carbon process operates within a 50-mile zone, further capping the impact on the environment. The

rapeseed crop is grown as a 'break' crop - planted as part of the natural rotation between food and other crops that nature needs to keep farmland in prime condition.

Green Dragon Fuel costs £9.99 for a box of 12 logs and is available directly from Green Dragon Fuel and UK distributors. For more information visit www.greendragonfuel.co.uk or call 01623 871755.

Green Dragon has teamed up with distributor H Wood & Sons to give three *Towpath Talk* readers the opportunity to win four boxes of Green Dragon Fuel logs. Please visit www.greendragonfuel.co.uk and click on the *Towpath Talk* online competition section to enter.
